

QGIS Application - Bug report #12560

QGIS freezes when adding or removing layers in large project

2015-04-13 08:08 AM - Oskar Karlin

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:		
Affected QGIS version:	2.8.1	Regression?: No
Operating System:	MAc OS X	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	No	Copied to github as #: 20700
Description		
I have a huge project which consists of perhaps 20-50 layers (XML) and everything runs smooth until I remove or add another layer to the project. When I do the program freezes for about 5 minutes and then it works fine again.

Correction: it's not XML files, it's SHP files.

#2 - 2015-04-15 12:08 AM - Gerhard Spieles

Hello,

maybe a similar problem as in #12234

Removing all printcomposer entries, saving and new loading of the project was successful in my case.

Gerhard

Maybe so. But the thing is, I can't remove my print composers since they are much important to me.
