

QGIS Application - Bug report #12648

When editing a CSV (added as geometryless table) newly added records disappear after saving

2015-04-26 02:32 PM - Giovanni Manghi

Status:	Closed	
Priority:	Severe/Regression	
Assignee:		
Category:	Digitising	
Affected QGIS version:	2.8.1	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 20761
Description		
To see the added record is necessary to close and reopen the table of attributes.		
This was not the case in past qgis releases.		
There is also another inconsistency:		
the button to remove columns is active but then columns cannot be deleted. This wasn't the case in previous qgis releases.

History

#1 - 2015-06-01 03:10 PM - Jürgen Fischer

- Status changed from Open to Feedback

New records appear instantly here in the attribute table.

And the remove attribute button is on since virtual fields can be added and removed from all layers, even if the provider itself doesn't support removal of attributes.

| *New records appear instantly here in the attribute table.*

it does, but it disappear when you click "save". Then to see it you must close and reopen the table.
