QGIS Application - Bug report #12683
Processing refactor fields: python error on unhandeld field types
2015-04-30 08:08 AM - Médéric RIBREUX

Status:	Closed			
Priority:	Normal			
Assignee:	Victor Olaya			
Category:	Processing/QGIS			
Affected QGIS version:	2.8.1	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	fixed/implemented	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	20790	

Description

Hello,

I am facing errors when I try to use the "refactor fields" algorithm on some Oracle and SQLite layers.

It seems that the data type of some fields are not referenced in the FieldsMappingPanel.py/fieldTypes variable in the FieldsMappingModel class.

So far I've found that SQLite INTEGER (QLongLong for QGIS) and Oracle DATE (QDateTime for QGIS) field types are triggering errors in FieldsMappingPanel.py:

    An error has occured while executing Python code:

    Traceback (most recent call last):
      File "C:/Users/MRIBREUX/.qgis2/python/plugins\\processing\\algs\\qgis\\ui\\FieldsMappingPanel.py", line 138, in data
        return self.fieldTypes[value]
    KeyError: 4

Perhaps should you add some more types in fieldTypes variable. I've tried the following:

    fieldTypes = OrderedDict([
        (QtCore.QVariant.Int, "Integer"),
        (QtCore.QVariant.Double, "Double"),
        (QtCore.QVariant.String, "String"),
        (QtCore.QVariant.DateTime, "Date"),
        (QtCore.QVariant.LongLong, "Double"),
        (QtCore.QVariant.Date, "Date")])

... and was able to use the algorithm. For the moment, I've just found those two missing types but perhaps should we need to add more ?

Cheers !
