

QGIS Application - Bug report #12701

QGIS crashes when trying to add ODBC new layer

2015-05-06 08:34 AM - Joan Molinas

Status:	Closed	
Priority:	High	
Assignee:		
Category:	Data Provider/OGR	
Affected QGIS version:	2.8.1	Regression?: No
Operating System:	Windows	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 20807
Description		
<p>QGIS crashes (program closes) when attempting to add a new layer from ODBC Data Base connection.</p> <p>I try to establish an ODBC connection between a external database Informix and QGIS. The connection test succeeded, but take a lot of time. And when I click to open, QGIS crash and develop me a message "volcado fallido" long time after. Attached file created .dmp.</p> <p>I try to connect the same data base with eVis plugin and it works properly.</p> <p>Sorry for my English</p>

- Status changed from Open to Feedback
- Priority changed from Normal to High
- Target version deleted (Version 2.8.1)

Does it happens with previous qgis releases?

#2 - 2015-05-18 07:29 AM - Joan Molinas

I tried it with version 1.8, and it works but it takes very long time.

I've also tried with version 2.4 and does not work either. Exactly the same thing happens with version 2.8

I've also tested with another smaller database (with version 2.8), and it works but also take very long time, 15 minuts more or less.

And by de eVis plugin opens the list table more or less instantaneously (with two databases).

- Status changed from Open to Feedback

If anyway will provide me a way to test odbc connections with real daya I will be happy to test.
I tried with a PostgreSQL ODBC connection, and was slow, but no crashes on 2.18.4.
