

QGIS Application - Feature request #12788

Absolute path to images in composer

2015-05-20 06:48 AM - Filip Mahieu

Status:	Open	Resolution: Copied to github as #: 20886
Priority:	Normal	
Assignee:		
Category:	Map Composer/Printing	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>It would be nice to be able to save the absolute path to the images you use in a composer, and especially (more needed) a composer template.</p> <p>This would make it possible to save a standard template on a shared directory, and be able to let it use by all the QGIS-users in all of their projects. In this way they don't have to worry about the format, logo's, even if the company-logo changes; you just change one file!</p> <p>Now it is always a relative path in the .qpt-file. So if you change the place of you qgs-project, or you use a project in another directory, loading the template gives you a 'red cross', the link is not found anymore due to the fact it's a relative link..</p> <p>Thanx!</p>

I found a solution: see <http://gis.stackexchange.com/questions/90612/how-to-save-qgis-composer-template-with-image-e-g-company-logo/147928>

However, the feature request stays especially because one could want a template to be used by different users in different projects.

As an extension on this request I'll add a new request to be able to choose the setting 'absolute' as a default in all projects (in Project - properties - General - Save path). Now in every project one makes, 'relative' is set. To be able to set as default 'Absolute' (or 'Relative') would be nice.

- Easy fix? set to No

#3 - 2018-10-06 07:26 AM - Olivier Dalang

IMO this should be classified as a bug rather than feature request, as you'd expect all path to respect the project's relative/absolute setting.

Cheers !
