Category:	
Affected QGIS version: master	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied: No	Resolution:
Crashes QGIS or corrupts data: No	Copied to github as #: 20936
Description	
When exporting a PostGIS layer with a joined MSSQL table, the exports fails due to an invalid type issue on uint on QGIS 2.8.1, 2.8.2 and 2.9.0-master

Please provide more information about the involved tables and how they are joined and possibly the verbatim error message you get.

#2 - 2015-06-01 05:54 AM - Olivier Monod

Join is done on integer field on postgres' side (target layer) and on numeric(10,0) field type on MSSQL's side (joined table).

The verbose error message (french, sorry):

Type invalide pour le champ Divisions_DIV_HORS_INVENTAIRE[23]: réception de uint avec le type 0

Type invalide pour le champ Divisions_DIV_HORS_INVENTAIRE[23]: réception de uint avec le type 1

Looking into the joined layer's structure, the field Divisions_DIV_HORS_INVENTAIRE[23] is of type [\(bit,null\)](#) which is used as a boolean.

So, it looks like the shapefile export procedure fails to convert the bit value into FTLogical which is the [xBase logical](#) field type.

Hope it helps!
