<b>Crashes QGIS or corrupts data:</b>	<b>Copied to github as #:</b> 11345
<b>Description</b>	
Debian amd64, QT 4.4.0, SVN r9254.	
Sometimes when moving items in the composer strange leftovers crop out. Like the one on the attached screendump - those frames are not render artifacts, but they can't be selected to delete or move them. They are leftovers of a legend (the smaller one) and of a map, after removing those from the composition.	
One need to save a project and reload it to get rid of them.
