

## QGIS Application - Bug report #12918

### QGIS freezes when wheelzooming WMS layer via authenticating proxy

2015-06-09 02:58 AM - johanvdw -

<b>Status:</b> Closed	
<b>Priority:</b> High	
<b>Assignee:</b>	
<b>Category:</b> Map Canvas	
<b>Affected QGIS version:</b> 2.8.2	<b>Regression?:</b> No
<b>Operating System:</b>	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b> No	<b>Resolution:</b> not reproducible
<b>Crashes QGIS or corrupts data:</b> Yes	<b>Copied to github as #:</b> 21003
<b>Description</b>	
<p>Note that this issue is very similar to a bug which was reported on the mailinglist (I have not found it in trac): <a href="http://lists.osgeo.org/pipermail/qgis-developer/2015-May/037744.html">http://lists.osgeo.org/pipermail/qgis-developer/2015-May/037744.html</a></p> <p>When using the wheelmouse to zoom in qgis and an authenticating proxy is used, qgis freezes and must be killed. When using a non-authenticating proxy such as cntlm the problem does not occur.</p> <p>Tested on windows. This affects at least versions 2.6 and 2.8.2</p>	

#### History

##### #1 - 2017-03-08 12:49 AM - Giovanni Manghi

- *Crashes QGIS or corrupts data changed from No to Yes*
- *Priority changed from Normal to High*
- *Status changed from Open to Feedback*
- *Category set to Map Canvas*

Hi, is this still an issue in latest qgis releases as 2.18.4 or qgis3/master?

##### #2 - 2017-04-29 05:40 AM - Giovanni Manghi

- *Resolution set to not reproducible*
- *Status changed from Feedback to Closed*

Closing for lack of feedback, please reopen if necessary.
