

QGIS Application - Bug report #12923

Project with SQL Server Layers opens much slower in 2.8 than 2.6

2015-06-09 04:09 PM - Jason Moore

Status: Closed	
Priority: Normal	
Assignee:	
Category: Data Provider/MSSQL	
Affected QGIS version: 2.8.2	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: no timely feedback
Crashes QGIS or corrupts data: No	Copied to github as #: 21006
Description	
<p>I have a project that contains many sql server layers. In version 2.6 it opened in about 20 seconds in version 2.8.1 it takes about 100. I note a difference with even one layer taking considerably longer in 2.8.</p> <p>Windows 7 64bit desktop SQL Server 12 on Windows Server 12</p>

You have a spatial index on the layers?

I do have a spatial index on the feature table that stores all of the geometry data for the various views that I have set up for the layers that make up the project.

What do your views look like? Nothing special? Have a unique int column for a key?

#5 - 2015-06-19 04:29 AM - Jason Moore

Most are not very complex. Two or three joined tables, one always being the feature table which has a unique int column that is the primary key for that table and also contains the geometry. An example would be a view called QGIS_SAN_MHs, it contains three inner joined tables, SAN_MHs, DPW_DrainageStructures, and DAT_Features. All are linked on the fetID column which is primary int in DAT_Features.
