

QGIS Application - Feature request #1297

Add ability to control stroke capping for line symbology (or default to flat cap)

2008-09-05 01:52 PM - Ollie O'Brien -

Status: Closed	
Priority: Low	
Assignee: nobody -	
Category: Symbology	
Pull Request or Patch supplied:	Resolution: fixed
Easy fix?: No	Copied to github as #: 11357
Description	
<p>It would be good to have control over how stroke capping is set - so that strokes which have thickness x don't extend beyond the actual end of the polyline by distance $x/2$, but rather finish exactly at it.</p> <p>See http://doc.trolltech.com/4.5/gpen.html#setCapStyle</p> <p>Default is square capping, which causes the protrusion past the polyline end-point</p> <p>QT 3 default was for flat capping - looks like this changed in QT 4.</p> <p>Also looks like the old (pre 1.0) print composer setCapStyle to flat capping.</p> <p>One problem with flat-capping is that it might cause ugly white slivers to appear where two polylines meet each other not-quite head-on - so probably needs to be a configurable option.</p>

Isn't this solved in the new symbology? Can we close it?

#2 - 2010-04-24 04:40 PM - Ollie O'Brien -

- Resolution set to fixed

- Status changed from Open to Closed

Agreed, closing.
