

QGIS Application - Feature request #12981
Manage Layer Visibility item under Layer menu

2015-06-17 05:44 AM - Saber Razmjooei

Status:	Open	Resolution: Copied to github as #: 21059
Priority:	Normal	
Assignee:		
Category:	GUI	
Pull Request or Patch supplied:	Not supplied	
Easy fix?:	No	
Description		
<p>It will make sense to have the following items:</p> <p>Show all layers</p> <p>Hide all layers</p> <p>Show selected layer</p> <p>Hide selected layer</p> <p>and</p> <p>Add preset ...</p> <p>Remove current preset</p> <p>grouped and have them as a Manage layer visibility under Layer in the main menu.</p> <p>It is always tricky to refer to functions which only appears on a toolbar in the manual or training course docs.</p>
