

QGIS Application - Bug report #13025

trying to compile an application using qgis 1.8 with the 2.8

2015-06-22 05:55 AM - florent florent

Status: Closed	
Priority: Normal	
Assignee:	
Category: Build/Install	
Affected QGIS version: 2.8.2	Regression?: No
Operating System: ubuntu	Easy fix?: No
Pull Request or Patch supplied: No	Resolution:
Crashes QGIS or corrupts data:	Copied to github as #: 21101
Description	
<p>hello</p> <p>i have an old project that use the 1.8 library of qgis under ubuntu</p> <p>we need to upgrade the system and the application so we decide to install the last version of ubuntu, the last version 2.8 of qgis, qt 4.8.5</p> <p>but when we try to compile there is a lot of difference between these two versions</p> <p>i don't find any documentation on how to compile an old application with an old version of the qgis library with the 2.8 version</p> <p>by example we have a lot of messages like this :</p> <p>qgsuniquevaluerender no such file or directory</p> <p>we try to check the list of classes on qgis.org but without success</p> <p>please can you help me on how to proceed</p> <p>thanks a lot</p>

Hello Florent,

This is not a bug with QGIS. With any software update you expect some changes (see for example:

https://issues.qgis.org/wiki/17/Python_plugin_API_changes_from_18_to_20)

For guidance on how to upgrade your QGIS/application, best to send an email to dev/user list to help you.

I close the ticket for now. For specific problems, feel free to open new tickets.

here is some more information

same problem on the header file :

qgsrender.h, qgssymbologyutils.h, and qgssinglesymbolrender.h

for the last one i replace it with qgssinglesymbolrendererv2.h and it passes but stops on other headers

Problem with Build/Install is related to:

<https://github.com/qgis/QGIS>

and the instruction provided here:

<https://github.com/qgis/QGIS/blob/master/INSTALL>

For plugins and 3rd party application, not the right place to file a bug here.

As per my previous suggestion, try the mailing lists.
