

QGIS Application - Bug report #13058

Remove internal OWSlib copy

2015-07-01 04:18 AM - Paolo Cavallini

Status: Closed	
Priority: Normal	
Assignee: Tom Kralidis	
Category: MetaSearch Catalogue Client	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	Copied to github as #: 21128
Description	
<p>Curently we maintain an internal, old copy of OWSlib in the MetaSearch plugin (now core). Te lib is more up to date on Deb (which fixes a current bug in MS).</p> <p>I suggest to use the shared lib.</p> <p>This will require to add dependencies for major platforms.</p>

Is there any news about this requirement?

PS: For some reason the original ticket where we exchanged on this (with the test case of FAO Geonetwork), and where i have described the issue doesn't exist anymore (#12404) Is there a new linking? or has it been removed (!) ?

No movement on this issue yet. For reference/explanation, see this [discussion](#)

I think the issue here is maintaining OWSlib in [OSGeo4W](#) and the other [supported builds](#). We need to ensure there is an OWSlib packaging effort foreach of these.

P.S. we have moved all MetaSearch tickets into the main QGIS tracker. MetaSearch is now a category and related issues have been moved to https://issues.qgis.org/projects/quantum-gis/issues?category_id=107&set_filter=1&status_id=o

Hello, is there any news for this blocking bug? It would be good, at least, to have a workaround for this.

Thanks in advance
