

QGIS Application - Bug report #13078

Size of legend items

2015-07-06 02:01 AM - Holger Naumann

Status:	Closed		
Priority:	Normal		
Assignee:	Vincent Mora		
Category:	Symbology		
Affected QGIS version:	master	Regression?:	No
Operating System:	Ubuntu 14.04 LTS	Easy fix?:	No
Pull Request or Patch applied:	Yes	Resolution:	
Crashes QGIS or corrupts data:	No	Copied to github as #:	21146
Description			
<p>The legend looks ugly if i use map units in symbology.</p> <p>It looks very good in < 2.10.</p>

Associated revisions

Revision 8776449a - 2015-08-12 03:22 PM - Vincent Mora

Fix legend symbol size when using map units

fix #13078

The computation of icon sizes for legend symbols has been moved to QgsLayerTreeModel::legendInvalidateMapBasedData() such that icon size is recomputed when zooming.

Revision 7d1a8d30 - 2015-08-18 03:05 AM - Martin Dobias

Merge pull request #2245 from vmora/issue13078

Fix legend symbol size when using map units (fix #13078)

History

#1 - 2015-07-06 02:32 AM - Nyal Dawson

Can you share your project?

Nyall, it definitely looks like that, but I wasn't able to open the project when I tried (I think I forgot the symbols or something). I'm on a vacation at the moment, but I'll try and have a look asap.

Holger, what happens if you use mm instead of map units, does it look better, does the zoom level change anything ?

#7 - 2015-08-03 05:46 AM - Holger Naumann

- File *example.png* added

Hi Vincent,

if units are in mm, it is ok. But if one symbol is in mapunits, legend is broken.

#8 - 2015-08-05 02:32 AM - Vincent Mora

Hi Holger,

Thanks for the update. The thing that seems to be broken seems to be the cropping of the symbol, the symbol size is right but the symbol takes way to much place. I'll have a look asap.

#9 - 2015-08-05 09:02 AM - Vincent Mora

Nyall, I have a lead: when `QgsSymbolV2LegendNode::minimumIconSize` is called by `QgsDefaultVectorLayerLegend::createLayerTreeModelLegendNodes`, the `model()` is null, whereas it is not when `QgsSymbolV2LegendNode::data()` is called with decoration rôle.

For what I understand, it's a matter of setting the correct parent for the node in `createLayerTreeModelLegendNodes`. If you or Matthias could give me a hint, I'd be gratefull.

#10 - 2015-08-08 02:21 AM - Nyal Dawson

Vmora - Martin will be the one to contact about this, he's got the most knowledge of how the legends work...

#11 - 2015-08-13 12:05 PM - Vincent Mora

- Pull Request or Patch supplied changed from No to Yes

The fix is here <https://github.com/qgis/QGIS/pull/2245>

Holger: thanks for the report.

Martin: thanks for the pointers.

Hi Vincent, the problem is solved in the mapwindow. But in print composer, the problem exist.

#14 - 2015-08-29 03:20 PM - Nyall Dawson

Please note that the scaling of legend shapes in composer legends is intentional and is the same beahviour as previous versions. So that's not an issue.

However, it seems like the size of the legend isn't calculated correctly on composer load when the legend contains shape sizes in map units - the legend is set to a massive width & height. Forcing a refresh of the legend fixes the size.

- Status changed from Reopened to Closed

Actually - that's a unrelated issue. Closing this.
