Pull Request or Patch supplied:		**Resolution:**	not reproducable	
Crashes QGIS or corrupts data:		**Copied to github as #:**	21181	

Description

Hey there,

I think the last version that was working for me was Chugiak. Since trying to update since then, I constantly get a "qgis_core.dll is missing" error. I would love to have it up and running ASAP, so if there's a solution, let me know.

Thanks,
Cameron

Well... of course this seems very likely a local issue. Could you add more details? how did you installed (osgeo4w? standalone?). Have you tried a clean install (removing old versions and their leftovers)?
