| Description | | |
| <p>QGIS Layer Definitions files (QLR) are very useful.</p> <p>Sometimes, we have to create layer from selected features (attribute ou spatial query, or even manually select).</p> <p>But there is no way to create a layer based on this selection.</p> <p>In ArcGis, this function is called "Create layer from selected features", and is accessible by right clic on the source layer.</p> <p>This would be very useful : thank you in advance for developers who can implement this function !</p> <p>Sylvain M.</p> | | |

Forgot to say :

A similar function exists with the tool "Edit > Paste Features As > 'New Vector Layer' or 'New Memory Layer'".

However, this will duplicate data. QLR files have the advantage to continue working with source data.
