

QGIS Application - Feature request #13176

join non-spatial tabel

2015-08-03 06:31 AM - Sergio Antonio

Status:	Closed	Resolution: Copied to github as #: 21238
Priority:	Low	
Assignee:		
Category:	Data Provider	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>When one join a non-spatial table to attribute table it is possible to run a selection of features by expression using the fields of the non-spatial table, but it is not possible to run a query using the fields of the non-spatial table, unless the layer is saved with a new name. I suggest to enable queries using the fields of the non-spatial table without save the layer.</p>
