| Easy fix?:  | No     |   |
| Description   |        |   |
| <p>While exporting composer with world file, these files have extension like jgw, pgw, tfw....</p> <p>When saving the map canvas as image, the world file extensions are jpegw, pngw, tiffw...</p> <p>Would be better if the same logic is used for both...</p> |        |   |
