

QGIS Application - Bug report #1328

PostGIS layer editing - prepared statement "addfeatures" is not removed on failed saving added features

2008-09-22 07:15 PM - Steven Mizuno

Status: Closed	
Priority: Low	
Assignee: nobody -	
Category: Data Provider	
Affected QGIS version:	Regression?: No
Operating System: All	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed
Crashes QGIS or corrupts data:	Copied to github as #: 11388

Description

The situation: a table having a column constraint, such as NOT NULL, on a column other than the object id; used integer type in this case.

1. start Editing
2. add a feature
3. in the Enter Attribute Values dialog make the field that has the constraint have a value that violates the constraint, like a blank field

5. in Attribute Table, fix the value to a valid one.

<pre>

Can't get rid of the error until the layer is loaded again.

I was using a multipoint layer, but believe this affects all types.
