| One big QGIS dream would be to have an Illustrator (AI) file export from QGIS (like the one in ArcGIS) where text stay as text and layers stays as layers. That would be so awesome. Also CMYK support would be superb! |                                     |

AI files are (I think) closed files. I created SimpleSVG plugin some time ago to be able to export not too complex to svg for further editing in Inkscape. You could use that?

I keep the layers separated in (Inkscape) groups, and put the labels in a separate layer if I'm correct...

You could have a look into that one first.
