QGIS Application - Feature request #13445

Add legend type/properties for map composer: gradient, horizontal, with label offset

2015-09-28 03:17 PM - Juraj Betak

Status:	Open

Pull Request or Patch supplied:	No	**Resolution:**	
Easy fix?:	No	**Copied to github as #:**	21492

Description

Please, see attached image to understand the thread:

A - definition of thresholds for the color legend

B - visualisation of color legend in TOC

C - example what I am capable to construct via legend properties to map composer

My wish:

D - vertical color gradient with correct position of values (see offset next to the interval threshold), no outline for the interval colors

E - represents D, transformed to horizontal position

I do not know, how much work it is to implement features for creating such legend, but that would be really helpful.

I work with various kinds of gridded data for 15+ years on daily basis; E option would cover 90% of my needs for legend. It is logically correct and compact to save space in the layout. A lot of "unGIS" software/libs (like Matplotlib+Basemap) offer such legend type.
