

QGIS Application - Bug report #13480

Table join without virtual memory doesn't work

2015-10-01 06:35 AM - Romain Blanc

Status: Closed	
Priority: Normal	
Assignee:	
Category:	
Affected QGIS version: 2.10.1	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: not reproducible
Crashes QGIS or corrupts data:	Copied to github as #: 21525

Description

When a table (CSV or SQL) is joined to a layer with the "Cache join layer in virtual memory" **unchecked**, join is only done on the first attribute of the joined table, but it 's duplicated for all the entities (see screenshot).

Tested on 2.6, 2.8.2 and 2.10.1, all x64, on Windows 7 x64, on two differents computers.

A project with a table joined to a layer is in qgis_join.zip

History

#1 - 2016-06-09 09:15 PM - Nyal Dawson

- Resolution set to not reproducible
- Status changed from Open to Closed

Not reproducible on current master
