

QGIS Application - Bug report #13531

Pythonpath is reverted to old QGIS version on restart

2015-10-06 12:27 AM - Jeff Moyaen

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Build/Install	
Affected QGIS version:	2.10.0	Regression?: No
Operating System:	Win7	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 21573
Description		
[QGIS 2.10-1, w7, 64b]		
Not too sure what to do with that one, or whether it is actually important, but...		
Just reinstalled 2.10. I was looking at settings/options/system and realized that my PYTHONPATH variable is set to C:\Program Files\QGIS Brighton\apps\Python27\Lib		
Needless to say, Brighton is not present on my system anymore, and the said directory is empty.		
After changing it to something sensible (.../QGIS Pisa/....), closing and restarting, it turns out that it reverted back to Brighton.		
Sure enough, it is an error from my side -- the Windows env variables are set to C...Brighton, and there is an easy fix, but I was wondering, should (or not?) the installer do something about it ?		

History

- Status changed from Open to Feedback

We could reset PYTHONPATH in etc/ini/python.bat, where we also set PYTHONHOME. Not sure if that would do harm to some.

#2 - 2015-10-11 01:11 PM - Anita Graser

- Operating System set to Win7
- Subject changed from Pythonpath to Pythonpath is reverted to old QGIS version on restart
- Category set to Build/Install

#3 - 2015-11-26 07:51 AM - Jeff Moyaen

Funily enough, I'm now in Lyon and PYTHONPATH positively wants to be ... Pisa ! I tried to change it from options, but the next time I started QGIS (Lyon, 2.12) it was back to Pisa again.

#4 - 2015-12-20 09:01 AM - Giovanni Manghi

- Status changed from Feedback to Open

#5 - 2017-05-01 01:06 AM - Giovanni Manghi

- Regression? set to No

- Easy fix? set to No

#6 - 2019-03-09 03:07 PM - Giovanni Manghi

- Resolution set to end of life

- Status changed from Open to Closed

End of life notice: QGIS 2.18 LTR

Source:

<http://blog.qgis.org/2019/03/09/end-of-life-notice-qgis-2-18-ltr/>

QGIS 3.4 has recently become our new Long Term Release (LTR) version. This is a major step in our history – a long term release version based on the massive updates, library upgrades and improvements that we carried out in the course of the 2.x to 3x upgrade cycle.

We strongly encourage all users who are currently using QGIS 2.18 LTR as their preferred QGIS release to migrate to QGIS 3.4. This new LTR version will receive regular bugfixes for at least one year. It also includes hundreds of new functions, usability improvements, bugfixes, and other goodies. See the relevant changelogs for a good sampling of all the new features that have gone into version 3.4

Most plugins have been either migrated or incorporated into the core QGIS code base.

We strongly discourage the continued use of QGIS 2.18 LTR as it is now officially unsupported, which means we'll not provide any bug fix releases for it.

You should also note that we intend to close all bug tickets referring to the now obsolete LTR version. Original reporters will receive a notification of the ticket closure and are encouraged to check whether the issue persists in the new LTR, **in which case they should reopen the ticket**.

If you would like to better understand the QGIS release roadmap, check out our roadmap page! It outlines the schedule for upcoming releases and will help you plan your deployment of QGIS into an operational environment.

The development of QGIS 3.4 LTR has been made possible by the work of hundreds of volunteers, by the investments of companies, professionals, and administrations, and by continuous donations and financial support from many of you. We sincerely thank you all and encourage you to collaborate and support the project even more, for the long term improvement and sustainability of the QGIS project.
