Hi Regis, can you plz provide more details on how to reproduce. I attached the result of my attempt, and everything looks fine.

#3 - 2015-12-02 02:21 AM - Regis Haubourg

Hi,

easy in fact:

- test a point layer with a fixed symbol size to 24 for instance
- then replace size by an expression set to a constant of 24.

you have a far smaller icon with expression. I guess we have the old scaling area method still applying to any expression output

#4 - 2015-12-02 06:18 AM - Vincent Mora

- Pull Request or Patch supplied changed from No to Yes

PR is here <https://github.com/qgis/QGIS/pull/2528>

Thanks.

Hi, I would be very thanksfull if a backport to 2.12 could be done. (christmas is coming...)  
We financed this since 2.8 and that feature is ruined without this fix..
