

QGIS Application - Bug report #13584

Vertices snap to other when "Enable topological editing" is active

2015-10-13 02:53 AM - Piotr Kania

Status: Closed	
Priority: Normal	
Assignee:	
Category: Digitising	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: not reproducible
Crashes QGIS or corrupts data:	Copied to github as #: 21626
Description	
<p>Hi! I'm on win 7 sp1 x64, QGIS code revision - 43c046b</p> <p>I edit postgis layers - while dragging vertices with "Node tool" often appear situation visible in screenshot - it doesn't happen when I edit in qgis-dev-2.11 code revision - f3c7d85, all versions bigger have such behaviour. My layers are ok - I checked in another gis software. On screenshot everyone can see that highlighted line (which was edited with "Node tool") isn't a part of those long line, which is error. Those situations happen also while I edit polygon layer.</p> <p>Hi, I noticed that if I turn off "Enable topological editing" everything is ok - something wrong is with topological editing (QGIS code revision - 43c046b) - here (https://www.dropbox.com/s/gepxqonkazo5ith/shp.zip?dl=0) is shapefile with those errors ("lines" is correct and "line_error" is after edition)</p> <p>Screenshot: https://www.dropbox.com/s/mva8fvol3n6lwy/screenshot.png?dl=0</p> https://www.dropbox.com/s/gepxqonkazo5ith/shp.zip?dl=0

Is it not the same ticket as #13393?

#3 - 2015-10-14 10:20 PM - Piotr Kania

Yes, sorry - I will close #13393

#4 - 2015-12-26 07:07 AM - Giovanni Manghi

From the description is very difficult to understand what is/was the reported issue. A screencast would be much more better to help us try replicate.

From a quick test on the latest master I don't see anything wrong with snapping/topological editing.

Please leave further feedback, thanks.
