

# QGIS Application - Bug report #1359

## saving image files: missing extension

2008-10-19 09:04 AM - Paolo Cavallini

<b>Status:</b> Closed	
<b>Priority:</b> Low	
<b>Assignee:</b> Marco Hugentobler	
<b>Category:</b>	
<b>Affected QGIS version:</b>	<b>Regression?:</b> No
<b>Operating System:</b> All	<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	<b>Resolution:</b> fixed
<b>Crashes QGIS or corrupts data:</b>	<b>Copied to github as #:</b> 11419
<b>Description</b>	
When saving image files from map composer, the file type extension is not written	

### History

#### #1 - 2008-11-18 08:21 AM - Marco Hugentobler

You mean the file extension if not written even if entered by the user?

Or do you mean it is not automatically appended?

If it is the first: I cannot reproduce it. Does it only happen in certain cases?

If it is the second: I'm not sure that it should be. In Unix philosophy, the content of the file is independent from its extension.

Ok, after looking at other applications: some append extension automatically and others don't. I have the impression that the user-friendly ones do, so we should do it too.

- Resolution set to fixed

- Status changed from Open to Closed

QGIS 1.0 preview1 for Windows automatically appends extensions.
