

QGIS Application - Bug report #13653

make check failure: No module named QSql

2015-10-22 04:17 AM - Sandro Santilli

Status: Closed	
Priority: Normal	
Assignee:	
Category: Tests Suite	
Affected QGIS version: master	Regression?: No
Operating System:	Easy fix?: No
Pull Request or Patch supplied:	Resolution: end of life
Crashes QGIS or corrupts data:	Copied to github as #: 21688
Description	
<p>As of commit ca704913631b17846c6beae4ff4c080d9c8f2869 in master I get "66% tests passed, 56 tests failed out of 165" on "make check".</p> <p>The failing tests all seem related to not finding QSql. If that's only a test-dependency, could those tests be just skipped and a WARNING raised at configuration time ? Also, what do I need to install to meet that dependency ?</p>

I **think** this was fixed by having python-qt4-sql, but I still believe the tests should not run if the dependency is not found at source configuration time.

#2 - 2017-05-01 01:06 AM - Giovanni Manghi

- Easy fix? set to No

- Regression? set to No

#3 - 2019-03-09 04:09 PM - Giovanni Manghi

- Resolution set to end of life

- Status changed from Open to Closed

End of life notice: QGIS 2.18 LTR
