

QGIS Application - Bug report #13675

Crashes when I try to move the features of memory layer that is rendered by rules.

2015-10-26 07:02 AM - Lionel Cacheux

Status:	Closed	
Priority:	High	
Assignee:		
Category:	Digitising	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch applied:	No	Resolution: worksforme
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 21708
Description		
<p>Qgis crashes when I try to edit and move the features of memory layer that is rendered by rules. Happens in Qgis 2.12 and master on Windows 8.1-64 and Ubuntu 15.4.</p> <p>No crash with shapefiles or memory layers using other rendering methods.</p>

- Status changed from Open to Feedback

Can't reproduce ... can you provide detailed steps which trigger this?

#2 - 2015-10-27 07:26 AM - Lionel Cacheux

The crash happens, for example, if you create a new temporary scratch polygon layer, apply a rule-based symbology depending on a field and try to move one of the features. It causes a crash with a minidump.
