| <p>When I add a feature to a shapefile dataset. I can't see the new feature in the attribute table.<br/>If I close the attribute table, I can't see any dat in attribute table.<br/>I must remove layer and add it back to get correct attribute table.<br/>Step to reproduce:<br/>- Open a shapefile containing point (I can give a simple dataset if it is useful)<br/>- Open associated attribute table<br/>- Make layer editable<br/>- Select a point<br/>- Copy the point<br/>- Paste the point<br/>- Look for the duplicate point in attribute table (you won't see it)<br/>- Close attribute table<br/>- Open attribute table (you won't see any row)</p> <p>I'm using svn trunk r9537 on ubuntu 8.04</p> |                                     |
