

QGIS Application - Feature request #13774

keep invalid layers

2015-11-06 04:21 AM - Gavin Fleming

Status:	Open	Resolution: Copied to github as #: 21800
Priority:	Normal	
Assignee:		
Category:	Unknown	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>If I can't load a layer on opening a project, for example if a database is unavailable, I would like the layer to remain in the project (or at least have the option to keep it or lose it), even if it's temporarily unusable. Then, the next time I open the project and the data source is available, the layer is there and I haven't lost any properties.</p>
