

QGIS Application - Feature request #13801
overwrite and create styles in database with list of available styles

2015-11-10 07:08 AM - Otto Dassau

Status:	Open	Resolution: Copied to github as #: 21826
Priority:	Normal	
Assignee:		
Category:	Symbology	
Pull Request or Patch supplied:	Not supplied	
Easy fix?:	No	
Description		
<p>Hi,</p> <p>compared with the overwrite and create procedure for local styles as .qml file, it is currently more difficult, if the styles are stored in a database.</p> <p>It would be a nice feature, if the "save in database" feature provides a list of all styles for the selected table and allow to overwrite existing styles or save a new one.</p> <p>Thanks a lot Otto</p>
