QGIS Application - Feature request #13803
Color of selection for each layer separately

2015-11-10 10:10 AM - Lukasz Sychowicz

Status:	Open		
Priority:	Normal		
Assignee:			
Category:	Map Canvas		
Pull Request or Patch supplied:	No	**Resolution:**	
Easy fix?:	No	**Copied to github as #:**	21828

Description

Ability to set a selection color for each layer separately, not (as it is now) only for the whole project.

History

- Category set to Map Canvas

- Status changed from Open to Feedback

can you provide a use case for such feature?

#2 - 2015-11-10 01:21 PM - Lukasz Sychowicz

For example, to compare two similar layers differing only in geometry details

#3 - 2015-11-10 01:28 PM - Nyall Dawson

Why does that require two different selection colours?

#4 - 2015-11-16 07:58 AM - Christian Roettger

I attached a Screenshot (left QGIS, right ArrghGis) which explains a use case where i think this feature will be very useful. One has a reference area (yellow hatched), the actual size/area (yellow fat border) like it has to be and the features which are already digitized (which is hard to see in orange normal border). With the actual QGIS selection everything would be yellow filled and you can't see what has to be edited. I think there are other examples where this feature increases digitizing and usability.

ok. another way.

in this case:

I want to see which element belongs to which layer when I select something in both layers.

For now I do not see.
