Description

A possibility to define the standard row height and column width would be fine (maybe here: Settings > Options > Data Sources or by right clicking the table headers) - see bug report #12700. Furthermore it would be good if manually changed column widths and row heights would be saved and restored after reopening an attribute table.

That would be a feature that also for our organisation would be useful.

We would appreciate to implement that, maybe at the level of the layer in a project.
