

QGIS Application - Bug report #13951

QGIS crashes when trying to view polygon whose border intersects itself

2015-12-06 08:35 AM - Martin Formanek

Status: Closed	
Priority: Normal	
Assignee:	
Category: Data Provider/MSSQL	
Affected QGIS version: 2.10.1	Regression?: No
Operating System: MS Windows (x64)	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: fixed/implemented
Crashes QGIS or corrupts data: Yes	Copied to github as #: 21966

Description

Steps to reproduce:

1. Create a MSSQL table that contains a geometry column, enter it into `geometry_columns` as a polygon column. Other DMBS or layer sources were not tested.
2. Insert a polygon into this table so that the border of this polygon intersects itself. For instance: POLYGON ((1828516.9115728119 6141376.1206908831, 1828546.9845998669 6141344.1511666263, 1828498.8841384889 6141359.1626806306, 1828528.957165543 6141327.1931563737, 1828516.9115728119 6141376.1206908831))
3. Try to add this table as a layer into QGIS

Expected outcome

Version 1: QGIS displays the polygon.

Version 2: QGIS displays an error message stating that it cannot display a polygon if its border intersects itself.

Actual outcome

QGIS crashes with a memory access violation.

Details

- Operating system: Windows 10 (x64)
- QGIS version: 2.10.1 "Pisa"
- The minidump file is attached.

The problem was encountered by accident, I meant to create a rectangle and mixed up two points. Therefore, it is not very important to me. However, it confused me a lot. I really expected QGIS to display this polygon.

History

#1 - 2015-12-06 08:38 AM - Martin Formanek

I could not attach the minidump because I had kind of overlooked that the file was 28MB. Some information from it, as text:

Dump Summary

Dump File: qgis-20151206-164157-32-10916-d20c5b7.dmp :

C:\\Users\\Martin\\AppData\\Local\\Temp\\qgis-20151206-164157-32-10916-d20c5b7.dmp

Last Write Time: 06/12/2015 16:41:57

Process Name: qgis-bin.exe : C:\\Program Files\\QGIS Pisa\\bin\\qgis-bin.exe

Process Architecture: x64

Exception Code: 0xC0000005

Exception Information: The thread tried to read from or write to a virtual address for which it does not have the appropriate access.

Heap Information: Not Present

System Information

OS Version: 10.0.10240

#2 - 2016-01-19 04:42 AM - Sandro Santilli

- Status changed from Open to Feedback

Can you still reproduce with current 2.14-pre version ?

If so, do you get any ERROR line printed on the console, prior to the crash ?

#3 - 2016-02-21 03:17 AM - Martin Formanek

I'm sorry for the delay.

I couldn't find a "2.14-pre" version, so I downloaded the latest weekly build (2.13.0-7).

The weekly build does not display the polygon either, but at least it doesn't crash.

As the crash is resolved, I would personally consider this ticket ready to be closed.

#4 - 2016-04-09 12:43 PM - Giovanni Manghi

- *Resolution set to fixed/implemented*

- *Status changed from Feedback to Closed*
