Easy fix?:	No	Copied to github as #: 21992
Description		
<p>When adding vectors from ARC/INFO Binary Coverage folder, QGIS is not picking the attributes that are stored in "info" subfolder which contains the respective .nit and .dat files.</p> <p>Field names and values there are visible as plain text, but the data structure is off, and I have no idea how to convert it to something useful.</p> <p>I so wish the info folder is processed together with the spatial data, or at least the attribute data becomes available as a table so that I can import it to QGIS.</p> <p>Thanks.</p>
