

QGIS Application - Bug report #14031

refresh WFS option (using current extent)

2015-12-23 04:44 AM - Kay Warrie

Status: Closed	
Priority: Low	
Assignee:	
Category: Web Services clients/WFS	
Affected QGIS version: 2.12.1	Regression?: No
Operating System: all	Easy fix?: No
Pull Request or Patch supplied: No	Resolution: not reproducible
Crashes QGIS or corrupts data: No	Copied to github as #: 22044
Description	
<p>My employer has several WFS with very large datasets. (Example, this one: https://www.dov.vlaanderen.be/geoserver/dov-pub/Boringen/wfs) If you add this as caching WFS all the data will be loaded, and will be incomplete. If you request this as a non-caching WFS, the WFS won't be updated any more. If you load only the data within a boundingbox, you can't update bbox anymore.</p> <p>I think a refresh WFS bbox button or context-menu option or something similar would be a relative simple solution, that will allow the users to reload the data of WFS-layer without having to add it again into the project and losing all configuration.</p>	

History

#1 - 2015-12-23 04:57 AM - Kay Warrie

Clarification: on 2.8.x once a non-caching WFS been loaded at full extent it won't be reloaded anymore.

#2 - 2017-01-17 06:34 AM - Giovanni Manghi

- Resolution set to not reproducible
- Status changed from Open to Closed

Since the report the wfs client has been overhauled, and options changed/removed. The available "only request features overlapping..." works as expected now.
