QGIS Application - Bug report #14059
QGIS Server crash with OTF active and layer without features
2016-01-06 05:00 AM - Horst Düster

Status:	Closed			
Priority:	High			
Assignee:				
Category:	QGIS Server			
Affected QGIS version:	2.8.5	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	not reproducable	
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	22069	

Description

1. open new project
2. add layer with features and CRS definition EPSG:4326
3. remove all features
4. select OTF different from the layer CRS EPSG:3857
5. publish the project with QGIS Server
6. GetCapabilities request leeds to QGIS Server crash -> INTERNAL SERVER ERROR 500

With OTF EPSG:4326 QGIS Server works fine!

This error affects all QGIS Server releases from 2.8 - 2.12

History

#1 - 2016-01-06 05:02 AM - Horst Düster

- Crashes QGIS or corrupts data changed from No to Yes

#2 - 2016-01-06 05:03 AM - Giovanni Manghi

- Priority changed from Normal to High

#3 - 2016-01-06 05:04 AM - Giovanni Manghi

- Status changed from Open to Feedback

Do you have any evidence that was not crashing in qgis < 2.8 ?

#4 - 2016-01-06 05:06 AM - Horst Düster

No I don't have any evidence. I only checked the mentioned releases.

#5 - 2016-04-10 12:01 AM - Giovanni Manghi

- Status changed from Feedback to Open
- Target version deleted (Version 2.14)

#6 - 2017-03-07 05:24 AM - Giovanni Manghi

- Resolution set to not reproducable
- Status changed from Open to Closed

Cannot replicate with QGIS Desktop/Server 2.18.4

please reopen if necessary.
