

QGIS Application - Feature request #14060

Composer: Add an option to select the page to export

2016-01-06 08:40 AM - Harrissou Santanna

Status:	Open	Resolution: Copied to github as #: 22070
Priority:	Normal	
Assignee:		
Category:	Map Composer/Printing	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>Create a multi page composition and "Export as image" this one.</p> <p>You'll most of the time need to rename some of the generated files to a more explicite name.</p> <p>Then you realize that there is a mistake on one page.</p> <p>You fix this in the composer and need to export <b>the whole</b> composer again, generating files with unclear name that you'll need to delete (+ the time it took to export these unnecessary pages).</p> <p>It could be nice to be able to export only the issued page.</p>

- Description updated

The main request here is to be able to export a (set of) pages in a multipage print layout instead of always the whole composition.

Does anyone know if it's planned by someone? It bothers me from time to time (as I often use multipage to minimize the number of layouts in my projects) but unfortunately do not have means to fund it. I'll however gracefully document it if it lands ;)
