

QGIS Application - Feature request #14089

Discourage labels from other layers to cover features of a labelled layer

2016-01-12 03:28 AM - Harrissou Santanna

Status:	Open	Resolution: Copied to github as #: 22097
Priority:	Normal	
Assignee:		
Category:	Labelling	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>This issue report is related to this ML discussion</p> <p>Currently, you can:</p> <ul style="list-style-type: none">- label a layer and discourage labels from other layers to cover its features- discourage labels from other features to cover features of a not labeled layer <p>But what if I want to label a layer and don't want to see labels from other layers cover its features? I suppose I need to add it twice (a labeled one and a "discouraged" one).</p> <p>To improve the dialog and help fix the issue above, I propose to separate labelling matters from obstacles ones, by:</p> <ul style="list-style-type: none">- keeping in the current listbox : 'No Labels', 'Show labels for this layer', 'Rule-based labeling' options- and adding the "Discourage other labels from covering features in this layer" option in a checkable group box at the top of the dialog. <p>This groupbox will contain the current settings in Rendering tab > Obstacles.</p> <p>Both options can be used independently and people will clearly distinguish what belongs to labelling matters (in the listbox) and what is obstacles matters. Not mixed as it's currently.</p> <p>You can choose to "discourage other labels from covering features" (or not) for either a labeled or not labeled layer.</p> <p>This new group checkbox can then be inserted into "Rule Properties" dialog in case of rule-based labeling.</p>
