Description

1- Open QGIS

2- Add a polygon layer

3- Change to edit mode

4- For one of the polygons...select all the nodes....except leave 2 nodes unselected

5- Hit Delete key on the keyboard

All the feature is deleted.

Repead the above, but for step 4 leave only 1 node unselected.

Hit Delete...nothing happens.

IMO, all the feature should be removed (similar to the first case).
