Is this using a plugin? If so, the bug report should be filed with the plugin, not with QGIS itself

#2 - 2016-01-28 12:41 AM - Kurt Ludikovsky

It's part of the standard distribution.

As the crash occurs immediatly after calling the function, I can't say if this is core or plugin related.

#3 - 2016-01-28 12:46 AM - Nyall Dawson

The "web" menu is only populated by plugins though - there's no Web -> Save as SVG option available in core.

#4 - 2016-01-28 01:00 AM - Kurt Ludikovsky

I just did a simple check and created a simple test file, and the export worked.

So it's possibly really within the integrated plugin (simplesvg from Richard Duivenvoorde).

I'll create an entry there. (Reference <https://github.com/rduivenvoorde/simplesvg/issues/12>)

How is this then installed? I haven't ! It's been a clean install, no add-ons, just what has been downloaded.

But I have previous versions installed (1.8, 2.2). But each version is in a different directory.

Is the registry used for installations? How to handle then different versions.

#6 - 2016-01-28 01:55 AM - Martin Dobias

Plugins installed by the user are shared by all releases (installations) of QGIS 2.x. Only plugins for QGIS 1.x are independent because they are installed to a different directory.

- *Status changed from Feedback to Closed*
- *Resolution set to invalid*

As this is a plugin related bug, I am closing the report...
