Category:	Virtual Fields	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 22193
Description When a layer is duplicated via the "Duplicate layer" menu item, virtual fields are not re-created in the newly added (duplicated) layer. Steps to reproduce 1. Add a vector layer to an empty project 2. Open the layer properties window, go to the field panel 3. Add a virtual field (any expression will do) 4. Apply the settings and leave the properties window 5. Right-click on the layer, and select the duplicate item 6. Open the properties window of the newly-created layer, and notice the absence of virtual field(s).
