Crashes QGIS or corrupts data:

Copied to github as #: 22209

Description

Dear QGis maintainers,

the "save as" command throws an error while trying to save a geopackage file with an hyphen in its name (please see the screenshot attached).

Dis I miss something? Is there a rule for omitting some characters from SQLite filenames?

Kind regards,

Julien

History

#1 - 2016-02-02 04:11 AM - Giovanni Manghi

- Affected QGIS version changed from 2.12.2 to master
- Category set to Vectors

 $weird, no issues \ doing \ the \ conversion \ from \ the \ command \ line \ with \ ogr2ogr, \ I \ would \ have \ expected \ the \ same \ error.$

#2 - 2017-05-01 01:06 AM - Giovanni Manghi

- Easy fix? set to No
- Regression? set to No

#3 - 2018-06-18 01:08 PM - Johannes Kroeger

Dupe of #13140

#4 - 2018-06-18 01:21 PM - Nyall Dawson

- Resolution set to duplicate
- Status changed from Open to Closed
- Description updated
