

QGIS Application - Bug report #1425

Wrong contents displayed for corresponding path when adding layer (vector)

2008-11-24 01:21 PM - joe larsen

Status: Closed	
Priority: Low	
Assignee: nobody -	
Category: Build/Install	
Affected QGIS version:	Regression?: No
Operating System: Windows	Easy fix?: No
Pull Request or Patch supplied:	Resolution: worksforme
Crashes QGIS or corrupts data:	Copied to github as #: 11485
Description	
When I start QGIS and add a layer (vector), the folder contents do not correspond to the filepath chosen (e.g. what is chosen after 'Look in:') in the 'Open an OGR Supported Vector Layer' window.

Can't replicate this bug on XP Home with QGIS 1.0 preview1.

Does it happen also when adding raster layers? Does it persist if you choose another filepath?

#2 - 2008-12-08 09:19 AM - joe larsen

- Resolution set to worksforme

- Status changed from Open to Closed

I suspect this issue may have arisen with my 0.11 install, 1.0 preview2 install and 'Metis' running from USB - all used on the same workstation.

I cannot replicate the error at this time. Resolving as 'worksforme'.
