Crashes QGIS or corrupts data:		**Copied to github as #:**	22262

Description

I have two layers - settlement point layer and polygon layer, which contains an object that I would like to use as an obstacle for the labels of settlements. I'm applying the following steps:

1. Label settlements with *Show labels for this layer* option, as a result some labels cover polygon boundary

2. In the polygon layer *Properties* dialogue I select *Labels > Discourage other labels from covering features in this layer*, and click OK

3. Nothing changes, and when I check *Properties > Labels* of the polygon layer the option is set to the default *No labels* value.

The same steps work perfectly fine in 2.12.3

History

- Status changed from Open to Feedback

This should be fixed since 2.14. Can you confirm?

#2 - 2016-06-13 01:01 AM - Daria Svidzinska

- Status changed from Feedback to Closed

Thank you, Nyall. Everything is ok in QGIS 2.14. I've changed the status to closed.
