I can't reproduce your error, but Modeller calculator does not works for me too (another error). Can you check if commit:1ffccf05c9 fixes your issue?

#2 - 2016-02-16 11:08 PM - Paolo Cavallini

Checked, same error.

Thanks.

#3 - 2016-02-17 06:46 AM - Alexander Bruy

Can not reproduce this error with latest master on Linux and with yesterdays OSGeo4W under Windows.

Are there any other messages, e.g. in the console or in the Log tab of the algorithm?

Model from training manual does not work for me too, but with different error.

#### #4 - 2016-02-17 11:26 PM - Paolo Cavallini

Tried once more (one numeric input,  $a*a$ ), still same issue. No other error from either log or console, besides the one reported.

- File *qgis\_error.png* added

Hi all,

I have the same error with QGIS 2.10 and 2.12 running on Windows... Both versions are on different computers. When I try to edit a first model there is no error. But then I try to edit an other model (using the first model) and then I have this error. I attach an image of this bug.

Any news from this issue ? Thanks !

#### #6 - 2016-03-06 02:39 AM - Giovanni Manghi

no error here on the latest master (and Processing shipped with it). Please test and report back.

#### #7 - 2016-03-15 10:39 AM - Paolo Cavallini

I cannot test on master right now. On 2.8.7, latest released Processing version, I still see the issue. Given that 2.8 is still an LTR, this might require a fix. Feel free to close it in case you're sure it has been fixed upstream, and no backport is necessary.

still no errors on master and 2.14.3,

can you please give it a try and report back?

#### #9 - 2016-05-24 02:04 AM - Paolo Cavallini

The exercise models are not working here, and should be updated. Feel free to colse this one if it works for you.

#### #10 - 2016-05-24 02:20 AM - Giovanni Manghi

- Resolution set to *worksforme*

- Status changed from Feedback to Closed

reopen if necessary.
