TestVectorLayerJoinBuffer hangs if database is not available

As with #14269, this other test is hanging due to missing database:

```
ctest -V -R vectorlayerjoin
...
102: QDEBUG : TestVectorLayerJoinBuffer::initTestCase() src/providers/postgres/qgspostgresconn.cpp: 207:
(QgsPostgresConn) [0ms] New PostgreSQL connection for dbname='qgis_test' host=localhost port=5432 user='postgres'
password='postgres' sslmode=disable
102: credentials for dbname='qgis_test' host=localhost port=5432 user='postgres' password='postgres' sslmode=disable
102: message: FATAL:  database "qgis_test" does not exist
102:
```

And sits there forever.

Revision 6365eb7e - 2016-02-16 03:28 PM - Sandro Santilli

Do not hard-code database connection parameters

Rely on libpq defaults instead (overridable via environment)

Fixes #14308
