

QGIS Application - Bug report #14384

Relation reference widget does not set value when referencing a memory layer

2016-02-26 03:23 PM - Sebastian Dietrich

Status:	Closed	
Priority:	Normal	
Assignee:	Matthias Kuhn	
Category:	Relations	
Affected QGIS version:	master	Regression?: No
Operating System:	unspecified	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 22365
Description		
<p>Tested with master (commit:dec28b4109933b55841053dd72355baac027812a).</p> <p>How to reproduce:</p> <ul style="list-style-type: none">- Create a new project- Create a memory layer named child with one attribute key- Create a memory layer named parent with two attributes, key and value- Create a relation with child being the child-layer and parent being the parent layer, linked by key- Set the edit widget for key in child to <i>relation reference widget</i>, using the relation created above- Add some features to parent- Add a feature to child, setting key to one of the features you just added to parent- Open the attribute table- Note that the feature has a value of NULL in the attribute key, but it should have the value you selected when creating it <p>When using a shapefile layer for parent instead of a memory layer, everything works as expected.</p>
