

QGIS Application - Bug report #14392

QGIS 2.14 has a wrong projection with rasters which are not in 4326

2016-02-29 11:57 PM - Etienne Trimaille

Status:	Closed	
Priority:	Severe/Regression	
Assignee:		
Category:	Projection Support	
Affected QGIS version:	2.14.0	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 22373
Description		
<p>With 2.14, if I try to open a raster which is not in EPSG:4326 (the raster in 3857 enclosed for instance), the EPSG displayed in QGIS is wrong.</p> <p>It displays EPSG:4326, with OTF off.</p> <p>I put a screenshot with 2.14 and 2.8 :</p> <p>2.14 : https://files.gitter.im/qgis/QGIS/mfWy/Selection_004.png</p> <p>2.8 : https://files.gitter.im/qgis/QGIS/BOiU/Selection_005.png</p> <p>We can see the map canvas is in 4326, but my coordinates are not in 4326 (both in GUI and console).</p> <p>With QGIS 2.8, everything works fine.</p>

- Status changed from Open to Feedback

I can't reproduce. Can you attach a self contained project which demonstrates this issue?

#2 - 2016-03-02 12:24 AM - Etienne Trimaille

- File issue-14392.zip added
- File wrong_coordinates.png added

I've added a zip. For me, I just have to open the raster provided in an empty project to reproduce the bug.
Tim and Nathan could replicate the issue too.

#3 - 2016-03-02 12:57 PM - Nyal Dawson

So it seems like to me that it's just the initial state of the EPSG display in the status bar which is wrong. It's showing 4326, but the project is actually in 3857. You can confirm this by opening project properties and checking the CRS - the status bar should switch back to correctly show 3857.

Can you confirm?

#4 - 2016-03-04 12:40 AM - Etienne Trimaille

| You can confirm this by opening project properties and checking the CRS - the status bar should switch back to correctly show 3857.

The status bar doesn't update to 3857 here when I'm checking in the project properties.
What do you do to update the status bar ?

#5 - 2016-03-04 11:04 AM - Nyal Dawson

Just open project properties and flip to the projection tab

#6 - 2016-03-07 08:03 PM - Etienne Trimaille

Ah yes, it updates the status bar and in pyqgis too.
Will you fix the initial EPSG state ?

#7 - 2016-03-07 09:29 PM - Nyal Dawson

It's not on my personal list of stuff to fix. Maybe someone else will volunteer to look at this one.

#8 - 2016-03-14 02:46 PM - Maximilian Krambach

I'm fairly new to bughunting, so excuse me if it is a red herring and/or wrong code.
<https://github.com/qgis/QGIS/blob/master/src/gui/layertree/qgslayertreemapcanvasbridge.cpp#L146>

it checks, at loading of first layers, if the layer's crs has changed. It just checks for it is vector data and if those are valid.
Including something like (see below) may resolve the issue.

```
QgsRasterLayer *rl = qobject_cast<QgsRasterLayer *>( layerNode->layer()

if ( rl )
{
    mCanvas->setDestinationCrs( rl->crs() );
    mCanvas->setMapUnits( rl->crs().mapUnits() );
    break;
}
```

#9 - 2016-03-14 05:36 PM - Nyal Dawson
- Status changed from Feedback to In Progress

Maximilian -- good catch, I can see where the regression occurred now. Fix in progress.

#10 - 2016-03-14 06:20 PM - Nyal Dawson
- Status changed from In Progress to Closed

Fixed in changeset commit:"15d2be26f1235d9ec18b48f09376390c3a6e2d00".
