Description				

The current behavior of the Processing options search is not very userful. For example, searching for the PySAL provider reduces the displayed list to an empty tree of all providers:

Processing options			×

Setting	Value		
💮 🏶 General

The PySAL section is empty, the relevant "activate" option is hidden and cannot be accessed as long as the search is active. Removing the search collapses the whole tree again and the user has to manually navigate to the PySAL entry to activate it:
